# IEEE Book Series on Systems Science and Engineering

## Sustainable Solid Waste Management: A Systems Engineering Approach

Ni-Bin Chang and Ana Pires

*Sustainable Solid Waste Management: A Systems Engineering Approach* explains how we understand and generate better sustainable solid waste management practices. This book also aims to advance interdisciplinary understanding of intertwined facets between policy and technology relevant to solid waste management issues interrelated to climate change, land use, economic growth, environmental pollution, industrial ecology, and population dynamics. This text is recommended for systems engineering scientists & researchers, solid waste managers (urban waste, industrial waste and hazardous waste), senior undergraduate and graduate students who work on solid waste management.

Cloth | 912 pages  
2015 | ISBN 978-1-118-45691-0  
List Price USD \$149.95 | £100.00 | €120.00  
Sale Price USD \$112.46 | £75.00 | €90.00

## System Design and Control Integration for Advanced Manufacturing

Han-Xiong Li and XinJiang Lu

*System Design and Control Integration for Advanced Manufacturing* includes the most up-to-date research in system design and its integration with control, in addition to theoretical development and engineering applications. This book covers robust design for both static and dynamic systems using the nominal model information or the hybrid model/data information, and also integrates design with control under a large operating region. It is aimed at systems engineers, design engineers, quality engineers, and control engineers.

Cloth | 264 pages  
2014 | ISBN 978-1-118-82226-5  
List Price USD \$89.95 | £60.50 | €72.60  
Sale Price USD \$67.46 | £45.37 | €54.45

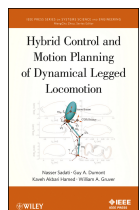

## Hybrid Control and Motion Planning of Dynamical Legged Locomotion

Nasser Sadati, Guy A. Dumont, Kaveh Akabri Hamed, William A. Gruver

Introducing a multidisciplinary systems engineering approach for tackling many challenges posed by legged locomotion, *Hybrid Control and Motion Planning of Dynamical Legged Locomotion* provides the engineering detail readers' need to achieve dynamical legged locomotion, including hybrid models for planar and 3D legged robots, as well as hybrid control schemes for asymptotically stabilizing periodic orbits in these closed-loop systems. Complete with downloadable MATLAB code of the control algorithms and schemes, this book is an invaluable guide to the latest developments and future trends in dynamical legged locomotion.

Cloth | 272 pages  
2014 | ISBN 978-1-118-31707-5  
List Price USD \$102.95 | £66.95 | €80.40  
Sale Price USD \$77.21 | £50.21 | €60.30

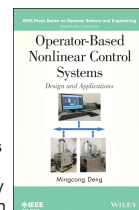

## Operator-Based Nonlinear Control Systems: Design and Applications

Mingcong Deng

*Operator-Based Nonlinear Control Systems: Design and Applications* focuses on the operator-theoretic approach, offering detailed examples on how to apply it to network controlled systems. In addition to current research results, the author explores future research directions and applications of the operator-theoretic approach. This book is recommended for students and professionals in control theory engineering and applied mathematics.

Cloth | 280 pages  
2014 | ISBN 978-1-118-13122-0  
List Price USD \$119.95 | £80.50 | €96.60  
Sale Price USD \$89.96 | £60.37 | €72.45

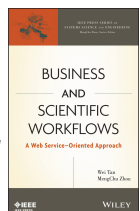

## Design of Business and Scientific Workflows: A Web Service-Oriented Approach

Wei Tan and MengChu Zhou

Utilizing web computing and Service-Oriented Architecture (SOA), *Business and Scientific Workflows: A Web Service-Oriented Approach* focuses on how to design, analyze, and deploy web service-based workflows for both business and scientific applications in many areas of healthcare and biomedicine. It also discusses and presents the recent research and development results. This book is ideal for researchers, engineers, scientists, professionals, and students who work on service computing, software engineering, business and scientific workflow management, the internet, and management information systems (MIS).

Cloth | 166 pages  
2013 | ISBN 978-1-118-17133-2  
List Price USD \$120.00 | £80.50 | €96.60  
Sale Price USD \$90.00 | £60.37 | €72.45

## Modern Machine Learning Techniques and Their Applications in Cartoon Animation Research

Jun Yu and Dacheng Tao

This book helps readers learn the latest machine learning techniques, including patch alignment framework; spectral clustering, graph cuts, and convex relaxation; ensemble manifold learning; multiple kernel learning; multiview subspace learning; and multiview distance metric learning. It then presents the applications of these modern machine learning techniques in cartoon animation research. With these techniques, users can efficiently utilize the cartoon materials to generate animations in areas such as virtual reality, video games, animation films, and sport simulations.

Cloth | 208 pages  
2013 | ISBN 978-1-118-11514-5  
List Price USD \$92.95 | £60.50 | €72.60  
Sale Price USD \$69.71 | £45.37 | €54.45
