

## **TC Updates**

The SSE Intelligent Power and Energy Systems Technical Committee has run a Project Authorization Request (PAR) workshop in Changsha in September 2023. Energy storage systems are key assets in smart cities to help achieve sustainability goals. One of the major standardisation challenges are with the monitoring, safety, and control of energy storage systems. As such, the PAR from “study group for monitoring, safety and control of energy storage systems for smart cities” has been recently submitted to IEEE SA for approval consideration with SMC is the sponsor. More details can be found here: <https://sagroups.ieee.org/smart-cities-energy/>

Please contact the Study Group Chair, Dr Chun Sing Lai ([chunsing.lai@brunel.ac.uk](mailto:chunsing.lai@brunel.ac.uk)), for any question or interest to join the study group.
